

About Phoenixville Hospital

Phoenixville Hospital is a 153-bed acute-care facility with clinical partnerships with the Moore Eye Institute, University of Pennsylvania Health System, The Children's Hospital of Philadelphia, and The Philadelphia Hand Center. The hospital provides comprehensive medical services through approximately 25,000 emergency room visits, 8,200 inpatient admissions, and more than 700 community outreach programs annually. Approximately 1,000 babies are delivered each year. A full range of services and programs are offered, including an award-winning cardiovascular program, fully-accredited cancer center, comprehensive women's health services, as well as other specialty areas. The Phoenixville Hospital Outpatient & Surgery Center at Limerick, located just off Route 422, offers diagnostic imaging, outpatient surgery, pain management, wound care, and other services.

About Moore Eye Institute

Moore Eye Institute was established in 1991 to fill a vital need in the delivery of health care in the suburbs so patients did not have to leave their community to receive world class care. Moore provides patients in Delaware, Chester, and Montgomery counties with groundbreaking technologies and the finest specialty eye care in a partnership between Optometrists and Subspecialty Ophthalmologists in a hospital setting. Moore was the first in Pennsylvania to introduce the OCT and the third in the nation to introduce Digital ICG. With leaders in the field, leading technology, and a pioneering systemic, whole-person team approach to eye disease, we offer something 'Moore.' Our Mission is to provide "The Best Eye Care with a Total Human Perspective." We join our colleagues in the community (Optometrists and general Ophthalmologists) in caring for their patients by offering advanced surgical and diagnostic methods, with the caring human touch. Through extensive education and emphasis of early detection and prevention in coordination with the patients primary care eye doctors and general physicians, we reduce our patients' fears and treat and inspire them to take positive, proactive steps towards overcoming the obstacles associated with their individual situation.
